

PRIMARY CARE ACADEMY GP SYMPOSIUM 2025

Future of Primary Care: Individualising Patients' Diverse Needs

Family Physicians are at the frontline of managing chronic and complex medical disease that significantly impact patients' quality of life. Chronic eczema, senile cataracts and chronic heart failure although seeming distinct conditions - they share a common thread in primary care: early detection, multidisciplinary management, and patient-centred care. In an era of medical advances and increasingly diverse patient needs, family physicians must adopt an inclusive, adaptable approach that tailors care to different age groups, ethnicities, socioeconomic backgrounds, and comorbid conditions. This year's GP Symposium brings together leading experts to explore the latest frontiers in primary care setting while equipping family physicians with advanced healthcare strategies to optimise health outcomes across a diverse patient population.
