

# Cardiology CME: Familial Hyperlipidemia

“Familial Hyperlipidemia (FH) is a common yet often underdiagnosed genetic disorder that significantly increases the risk of premature cardiovascular disease due to lifelong elevated LDL cholesterol levels. I will highlight the importance of early identification and diagnosis in primary care, discuss practical screening strategies, and review current evidence-based management approaches including lifestyle modification and lipid-lowering therapies. Empowering GPs with this knowledge is crucial to improving patient outcomes through timely intervention and preventing the devastating consequences of untreated FH.”

## Date & Time

7 March 2026, Saturday  
12pm - 1pm

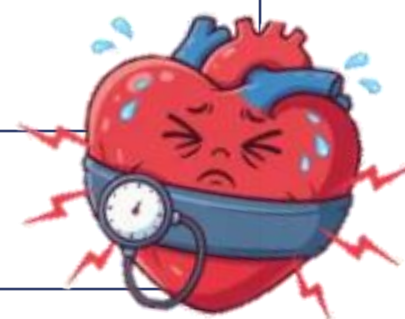

## Location

Zoom Webinar

## Presented by KTPH Cardiology

Dr Justin Tang I-Shing  
Senior Consultant  
KTPH Cardiology

Time	Activity
11.55am - 12:00pm	Participants log in
12:00pm - 12.40pm	Familial Hyperlipidemia
12.40pm - 1:00pm	Q & A Session

1 CME points pending approval
